Internship - Junior Business Change Analyst

We're looking for a bright and talented technical Junior Change Analyst who's passionate about IoT, connected devices to help implement digitalisation in manufacturing environment. You will analyse business efficiency, shape recommendations and deliver change, this will help improve business effectiveness and efficiency, impacting positively on the customer experience.

This organisation is one of the largest this type manufacturing plants in the Baltics and currently in process of revolutionising its manufacturing workflow. They are about to apply a number of IoT analytics element which is taking the market by storm alongside a number of innovate products set to be released this year.

This is currently a fast-transforming organisation, a company that has had more than 150 years history of innovation management.

The Role

- You will monitor the performance at business and functional levels, this will include business policies and workflows.
- Liaise with internal and external stakeholders to understand and investigate feedback into the service/product provided by customers
- Identify and design effective improvements for the business through data, statistical and predictive modelling practices
- You will evaluate risk and prediction of potential problems and come up with a solution.
- Research possible software solutions to increase work efficiency
- Support project teams during the analysis and planning stages
- Facilitate meetings and workshops in support of business change.
- Delivering change and ensuring measurable test plans are put in place for all improvement work.

What you’ll learn

- Enhance project management skills
- Practically apply data visualisation and management techniques
- Technical security fundamentals
- IoT and automation innovation management in manufacturing environment

Essential

- Drive and motivation to have things done
- Some basic skills in data handling and visualisation
- Interested in Automation and the IOT with a keen interest in learning more.

Desired Skills and Experience

This role will suit a graduate with a Business degree or a current Analyst looking for a step up in their career. You will have strong communication skills and come across well, strong problem-solving skills and be able to come up with solutions.
